## Simple Pay API

```
pay_page( array ( 'key'      => [ Merchant ID provided by PayU ],
                  'txnid'    => [ Unique Transaction Number ],
                  'amount'   => [ Payment Amount ],
                  'firstname' => [ Name of the customer ],
                  'email'    => [ Email Id of the customer ],
                  'phone'    => [ Mobile / Landline Number ],
                  'productinfo' => [ Product Description ],
                  'surl'     => [ Function ( success* ) to call in case of successful payment ],
                  'furl'     => [ Function ( failure* ) to call in case of failed payment ] ) ,
          [ Salt obtained from PayU ] );
```

\* success : This function needs to be defined.

\* failure : This function needs to be defined.

## Simple Pay Example

```
/* Include the payu library. */
require_once 'payu.php';

/* Call the pay_page function with the mandatory arguments. */
pay_page( array ( 'key' => 'tradus', 'txnid' => uniqid( 'animesh_' ),
                  'amount' => rand( 0, 100 ), 'firstname' => 'animesh',
                  'email' => 'animesh.kundu@payu.in', 'phone' => '1234567890',
                  'productinfo' => 'Product Info', 'surl' => 'payment_success',
                  'furl' => 'payment_failure'), '200' );

/* Payment successful - logic goes here. */
function payment_success() {
    echo "Payment Success" . "<pre>" . print_r( $_POST, true ) . "</pre>";
}

/* Payment failed - logic goes here. */
function payment_failure() {
    echo "Payment Failure" . "<pre>" . print_r( $_POST, true ) . "</pre>";
}
```
